The Highest Efficiency

BQ-132M series is produced with high efficiency multi-busbar cells, which can reduce the module internal power loss to improve its conversion efficiency, as well as lower the failure risk caused by cracks and broken busbar to enhance the module reliability Combined with half-cell technology, the module is highly resistant to hot-spot crisis caused by shadow effect

KEY FEATURES

Up to 380W front power and 20.9% module efficiency with half-cut and MBB (Multi Busbar) technology bringing more BOS savings. Reduce BOS cost with higher power bin and 1500V system voltage

Better anti-shading performance and lower operating temperature.

High standard Production, thinner wires that appear all black at a distance

Excellent IAM and low light performance. Lower temp co-efficient (-0.34%) and NOCT bring more energy leading to lower LCOE.

Ensured PID resistance through cell process and module material control. Resistant to salt, acid and ammonia. Mechanical performance: Up to 5400 Pa positive load and 2400 Pa negative load
